

Number line multiplying for 2 players

First of all

Decide who has which colour of pencil.

When it's your turn

Choose two of these numbers and say them out loud. (You may say the same number twice, for example 'Four and four'):

1 2 3
4 5 6

Multiply the numbers together and say the answer.

Draw a ring round that number on the number line.

You have won it. That number on the line can't be used again.

The rest of the game

Keep taking turns. The winner is the first person to win three numbers with none of their opponent's numbers in between.

For example, here grey wins:
